Another quality Hobson XBolt® screw anchor product with a Torx Drive Button Head. Hobson has given project designers another choice of head style and shape in their application.

Application:

Temporary or permanent formwork, street furniture, park benches and in prisons as an anti-tamper anchor. XBolts® can be used closer to the edge of the base material (concrete) than other mechanical anchors as the XBolt® has no expansion forces.

The Torx drive is used as an anti-tamper anchor because prisoners have less access to Torx drive bits, but the anchor and the base material can still be moved when needed.

Installation:

XBolts® are single unit screw type anchors that are used in solid concrete applications. Fixing is achieved by screwing the anchor into a drilled hole in concrete. As it is screwed in, the anchor taps the hole, thus enabling it to produce a mechanical interlock with the concrete.
