Parliament and of the Council of 9
March 2011

MEMBER OF EOTA

European Technical Assessment ETA-24/0507 of 2025/05/28

I General Part

Technical Assessment Body issuing the ETA and designated according to Article 29 of the Regulation (EU) No 305/2011: ETA-Danmark A/S

Trade name of the construction product:

Hobson Engineering Vinylester V401

Product family to which the above construction product belongs:

Bonded injection type anchor for use in concrete:
sizes M8 to M24, rebar 8 to 25 mm

Manufacturer:

Hobson Engineering Company Pty Ltd
10 Clay Place
Eastern Creek
NSW 2766
Australia
Tel. +61 2 8818 0288
Internet www.hobson.com.au
Plant 5

Manufacturing plant:

This European Technical Assessment contains:

20 pages including 14 annexes which form an
integral part of the document

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of:

EOTA EAD 330499-02-0601, "Bonded fasteners for
use in concrete"

This version replaces:

The ETA with the same number issued on 2024-06-07

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (except the confidential Annexes referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

II SPECIFIC PART OF THE EUROPEAN TECHNICAL ASSESSMENT

1 Technical description of product and intended use

Technical description of the product

The Hobson Engineering Vinylester V401 is a bonded anchor (injection type) for concrete consisting of a cartridge with Vinylester V401 injection mortar and a steel element. The steel element consists of a commercial threaded rod with washer and hexagon nut in the range of M8 to M24 or a reinforcing bar in the range of diameter 8 to 25mm.

The product specification is given in annex A.

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The characteristic material values, dimensions and tolerances of the anchors not indicated in Annexes shall correspond to the respective values laid down in the technical documentation¹ of this European Technical Assessment.

2 Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed intended working life of the anchor of 50 years and 100 years.

The indications given on the working life cannot be interpreted as a guarantee given by the producer or Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

¹ The technical documentation of this European Technical Assessment is deposited at ETA-Danmark and, as far as relevant for the tasks of the Notified bodies involved in the attestation of conformity procedure, is handed over to the notified bodies.

3 Performance of the product and references to the methods used for its assessment

3.1 Characteristics of product

Mechanical resistance and stability (BWR 1):

The essential characteristics are detailed in the Annexes C1-C5.

Safety in case of fire (BWR 2):

The essential characteristics are detailed in the Annex C6.

Hygiene, health and the environment (BWR3):

No performance assessed

3.2 Methods of assessment

The assessment of fitness of the anchor for the intended use in relation to the requirements for mechanical resistance and stability and safety in use in the sense of the Basic Requirements 1 has been made in accordance with EOTA EAD 330499-02-0601, “Bonded fasteners for use in concrete” option 1 and 7.

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

4.1 AVCP system

According to the decision 96/582/EC of the European Commission, the system(s) of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) is 1.

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ETA-Danmark prior to CE marking.

Issued in Copenhagen on 2025-05-28 by

HOBSON ENGINEERING VINYLESTER V401

Materials

Annex A4
of European
Technical Assessment
ETA-24/0507

Specifications of intended use

Anchorage subject to:

- Static and quasi-static loads: M8 to M24, Rebar Ø8 to Ø25 for 50 and 100 years working life

Base materials:

- Reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013 + A1:2016.
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016.
- Cracked and non-cracked concrete: M8 to M24, Rebar Ø8 to Ø25.

Temperature Range:

- I: - 40 °C to +40 °C (max long-term temperature +24 °C and max short-term temperature +40 °C)

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (all materials).
- For all other conditions according to EN 1993-1-4:2006+A1:2015 corresponding to corrosion resistance class:
 - Stainless steel A2 according to Annex A4, Table A1: CRC II
 - Stainless steel A4 according to Annex A4, Table A1: CRC III
 - High corrosion resistance steel HCR according to Annex A4, Table A1: CRC V (for marine environment)

Design:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- The Anchorages are designed in accordance with:
 - EN 1992-4:2018
 - Technical Report TR055, edition 2018

Installation:

- Dry and wet concrete.
- Flooded holes (not sea water).
- Hole drilling by hammer drilling (HD) or compressed air drilling (CD) used in Category 1 (dry and wet concrete) and Category 2 (flooded holes) for 50 and 100 years working life.
- Hole drilling by hollow drill bits for dust free drilling (HDB) (e.g. Bosch self-cleaning system including vacuum cleaner) used in Category 1 – dry and wet concrete for 50 years working life.
- Overhead installation allowed.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

	M 20	22	22 mm		$h_{ef} \leq 200$ mm	
	M 24	28	28 mm		$h_{ef} \leq 240$ mm	
Rebar 	ϕ 8 mm	10 or 12	10 or 12 mm	No cleaning needed	$h_{ef} \leq 80$ mm	Yes
	ϕ 10 mm	12 or 14	12 or 14 mm		$h_{ef} \leq 100$ mm	
	ϕ 12 mm	14 or 16	14 or 16 mm		$h_{ef} \leq 120$ mm	
	ϕ 14 mm	16 or 18	16 or 18 mm		$h_{ef} \leq 140$ mm	
	ϕ 16 mm	20	20 mm		$h_{ef} \leq 160$ mm	
	ϕ 20 mm	24	24 mm		$h_{ef} \leq 200$ mm	
	ϕ 24 mm	28	28 mm		$h_{ef} \leq 240$ mm	
	ϕ 25 mm	30	30 mm		$h_{ef} \leq 250$ mm	

Manual Cleaning (MAC):

Chemfix hand pump recommended for Blowing out bore holes with diameters $d_o \leq 24$ mm and bore holes depth $h_o \leq 10d$

Compressed air cleaning (CAC):

Recommended air nozzle with an Orifice opening of minimum 3,5mm in diameter.

**Hollow Drilling and Vacuum (HDB) (e.g. Bosch®)****Steel brush just for manual cleaning and CAC (not needed for HDB)****HOBSON ENGINEERING VINYLESTER V401**

Intended use – data

Annex B3

of European
Technical Assessment
ETA-24/0507

Table B3 - parameters: drilling, hole cleaning and installation

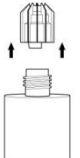

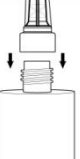

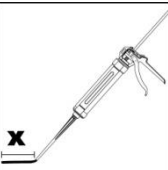

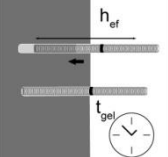

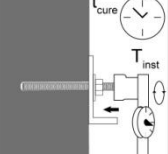

Instructions for use – Hammer drilling (HD) and Compressed air drilling (CD)		
Bore hole drilling		
		Drill hole in the substrate to the required embedment depth using the appropriately sized carbide drill bit.
Bore hole cleaning Just before setting an anchor, the bore hole must be free of dust and debris.		
a) Manual air cleaning (MAC) for all bore hole diameters $d_o \leq 24\text{mm}$ and bore hole depth $h_o \leq 10d$		
	X 4	The manual pump shall be used for blowing out bore holes up to diameters $d_o \leq 24\text{mm}$ and embedment depths up to $h_{ef} \leq 10d$. Blow out at least 4 times from the back of the bore hole, using an extension if needed.
	X 4	Brush 4 times with the specified brush size (see Table B1) by inserting the steel brush to the back of the hole (if needed with an extension) in a twisting motion and removing it.
	X 4	Blow out again with manual pump at least 4 times.
b) Compressed air cleaning (CAC) for all bore hole diameters d_o and all bore hole depths		
	X 2	Blow 2 times from the back of the hole (if needed with a nozzle extension) over the whole length with oil-free compressed air (min. 6 bar at 6 m³/h).
	X 2	Brush 2 times with the specified brush size (see Table B1) by inserting the steel brush to the back of the hole (if needed with an extension) in a twisting motion and removing it.
	X 2	Blow out again with compressed air at least 2 times.
HOBSON ENGINEERING VINYLESTER V401		Annex B3 of European Technical Assessment ETA-24/0507
Procedure (1)		

Instructions for use – Hollow drill bits for dust free drilling**Bore hole drilling and cleaning**

Select a suitable hollow drill bit (see Table B1) and install it into the hammer drilling machine.
Connect the dust extraction system to the aperture in the hollow drill bit. (e.g.: **Bosch®** system)
Drill the hole to the required embedment depth with the hammer drill set in rotation-hammer mode and with the dust extraction system working permanently at full power.

Bore hole cleaning: Manual cleaning is not necessary when using the self-cleaning drilling method.

Table B4 - parameters: After cleaning injection and installation of the stud/rebar

		Remove the threaded cap from the cartridge. Cut open the foil bag if necessary. (Chubpack cartridges).
		Tightly attach the mixing nozzle. Do not modify the mixer in any way. Make sure the mixing element is inside the mixer. Use only the supplied mixer.
		Insert the cartridge into the dispenser gun.
		Discard the initial trigger pulls of adhesive. Depending on the size of the cartridge, an initial amount of adhesive mix must be discarded. Each time when the mixer is changed, a new discard of waste is needed until the colour is homogeneous. Discard quantities are 10 cm for all cartridges
		Inject the adhesive starting at the back of the hole, slowly withdrawing the mixer with each trigger pull. Fill holes approximately 2/3 full, to ensure that the annular gap between the anchor and the concrete is completely filled with adhesive along the embedment depth.
		Before use, verify that the threaded rod is dry and free of contaminants. Install the threaded rod to the required embedment depth during the open gel time t_{gel} has elapsed. The working time t_{gel} is given in Table B2.
		The anchor can be loaded after the required curing time t_{cure} (see Table B2). The applied torque shall not exceed the values T_{max} given in Table A1.

ETA-24/0507

Table C9: Resistance to fire

ESSENTIAL CHARACTERISTICS	PERFORMANCE
Resistance to fire	No performance assessed

Table C10: Reaction to fire

ESSENTIAL CHARACTERISTICS	PERFORMANCE
Reaction to fire	In the final application, the thickness of the mortar layer is about 1 to 2 mm and most of the mortar is material classified class A1 according to EC Decision 96/603/EC. Therefore, it may be assumed that the bonding material (synthetic mortar or a mixture of synthetic mortar and cementitious mortar) in connection with the metal anchor in the end use application do not contribute to fire growth or to the fully developed fire and they have no influence on the smoke hazard.
