

m1tr and m1tr-C Throughbolt, stainless steel A4/316

**Torque-controlled expansion anchor
made of stainless steel for use in
cracked and non-cracked concrete**

1 SPECIFICATIONS OF INTENDED USE

Anchorage subject to:

- Static and quasi-static loading
- Seismic load, category C1 loads
- Resistance to fire (F120)

Base materials:

- Cracked and non-cracked concrete
- Reinforced or unreinforced normal weight concrete of strength classes C20/25 to C50/60 according to EN 206-1: 2000/A2:2005

Approvals:

- European Technical Approval Option 1 for cracked and non-cracked concrete
- Fire resistance test certification for F120
- Seismic performance category C1 and C2

Reaction to fire:

- Anchorage satisfy requirements for Class A1

Resistance to fire:

- Resistance in cracked and non-cracked concrete under fire exposure (F120)
- For fire design see ETA-12/0375, Annex C 3 to C 8

Installation:

- Hole drilling by hammer drilling only
- Cleaning the holes
- The fastener may only be set once
- For further information see ETA-12/0375, Annex B1

1.2 DESIGNATION OF ANCHOR PARTS AND MATERIALS

| Part | Designation | Material |
|------|------------------|---|
| 1 | Bolt | Stainless steel X2CrNiMo 17-12-2 acc. To EN 10088-3 (wr. 1.4404) |
| 2 | Expansion sleeve | Stainless steel X2CrNiMo 17-12-2 acc. To EN 10088-3 (wr. 1.4404) |
| 3 | Washer | DIN 125/1 A4 (normal), DIN 9021 A4 (large). Stainless steel AISI 316 similar acc. To EN 10088-2 |
| 4 | Hexagonal nut | DIN 934 A4-80 Stainless Steel AISI 316 similar acc. to ISO 3506-2 |

1.3 INSTALATION INSTRUCTIONS

- Drilling the hole
- Cleaning the hole
- Fixing plug and building material
- Tightening with the torque wrench and predetermined value of T_{inst}
- Tightened fixation

Increasing resistance for pull-out failure based on ETA-05/0070

For minimum spacing, minimum edge distance and thickness of concrete member the above described loads have to be reduced.

5 REDUCE DESIGN RESISTANCE TO TENSION LOADS FOR LIMITED EDGE AND SPACING DISTANCE

REQUIRED PROOFS FOR DESIGN TENSION RESISTANCE FOLLOWING ETAG 001 Annex C:

- For use in non-cracked concrete; $N_{Rd,ucr} = \min(N_{Rd,s}; N_{Rd,p}; N_{Rd,c}; N_{Rd,sp})$
- For use in cracked concrete; $N_{Rd,cr} = \min(N_{Rd,s}; N_{Rd,p}; N_{Rd,c})$
- Reduction design resistance to tension loads is only valid for one limited edge distance or one limited spacing
- It may be assumed that splitting failure will not occur, if the edge distance in all directions is $c \geq 1.2 c_{cr,sp}$ and the member depth is $h \geq 2 h_{ef}$ (see ETA-12/0547 and ETAG 001 Annex C)
- With anchoring in cracked concrete, the calculation of the resistance splitting failure may be omitted if a reinforcement is present which limits the crack and resistance for concrete cone failure and pull-out failure is calculated for cracked concrete according to conditions given in ETAG 001 Annex C, 5.2.2.6 and 7.3

5.1 Steel failure $N_{Rd,s}$

Design resistance of one anchor in case of steel failure.

$$N_{Rd,s} = N_{Rk,s} / \gamma_{Ms}$$

Factor $\Psi_{h,sp}$ for splitting failure can be considered if $h > h_{min}$

$$N_{Rd,sp} = N_{Rd,sp}^0 \cdot \Psi_{spacing} \cdot \Psi_{h,sp}$$

$$\Psi_{h,sp} = \left(\frac{h}{h_{min}} \right)^{2/3} \leq 1.5$$

h = actual thickness of the member
 h_{min} = minimum thickness of concrete member

6 IMPORTANT NOTICE

Values given above are valid under the assumptions of sufficient cleaning of the drill hole and anchoring in non-cracked or cracked concrete. For the design the complete assessment ETA-12/0375 from 11 August 2015 has to be considered. In recommended resistance the partial safety factor for material as regulated in the ETA as a partial safety factor for load action $\gamma_L = 1.4$ are considered. For combination of tensile loads, shear loads, bending moments as well as reduced edge distances or spacing's (anchor groups) see ETA or Mungo design software. The data must be checked by the user under the responsibility of an engineer experienced in anchorage and concrete work. This is to ensure there are no errors and all data is complete and accurate and complies with all rules and regulations for the actual conditions and application. Anchor design is performed according to the ETAG 001, Annex C in combination with assessment ETA-12/0375 from 11 August 2015.
