

SA TS 101: 2015 – Now AS 5216

SA TS 101: 2015 is a **Standards Australia Technical Specification** that covers minimum requirements for anchorage design and product prequalification. The **2016 National Construction Code (NCC)**, officially released in May 2016, refers to **SA TS 101: 2015** as “deemed to satisfy”. Together, the revised **NCC** and **SA TS 101: 2015** further uplifts the level of safety and security in safety critical fastenings to concrete. **SATS101** covers both design of anchor connections

and how anchor products should be prequalified, be it post-installed anchors or cast-in channels.

Only anchors that have been prequalified in accordance with the provisions of **SA TS 101** Appendix B can be used with the new standard. Furthermore, **SA TS 101** Appendix B notes that anchor products with acceptable **European Technical Approvals/Assessments (ETA)** may be used with **SA TS 101**.

SA TS 101: 2015 – Hobson Engineering supply **Mungo** mechanical and chemical anchor products that have ETAs, specifically for customers requiring European approved anchor products. Our **Mungo** product portfolio remains strong and ready for the changes in our anchor industry, as a result of the **NCC** requirements.

SA TS 101: 2015 has been transferred to AS 5216.

Visit hobson.com.au for Articles.

Products which include the ETA logo are directly compatible with SA TS 101: 2015 and AS 5216.
